DARIAH SURVEY & DIGITAL PRACTICES

Contact: Mikko Tolonen & Inés Matres
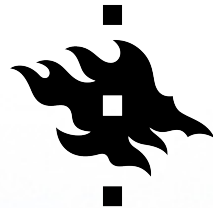

Survey link: **http://bit.ly/dariah-fi**

SURVEY ON RESEARCH PRACTICES AND NEEDS FOR DIGITAL RESEARCH

INFRASTRUCTURES IN THE ARTS AND HUMANITIES

The University of Helsinki is participating in DARIAH.eu, an European network for improving digital research infrastructures for the Arts and the Humanities. In this project we are undertaking a survey action to learn how researchers of humanities and related subjects in Finland use digital resources, to collect practice with specific methods and tools and and what they need from digital infrastructures. The survey has been designed by DARIAH internationally which will allow us to compare and contribute to other national partners (20 countries are taking part in this network). The survey will be evaluated by us, and only quantitative responses will be shared. No personal identity information will be shared with third parties.

MILDRED & RESEARCH DATA INFRASTRUCTURE

UNIVERSITY OF HELSINKI

MILDRED – RESEARCH DATA INFRASTRUCTURE

What is MILDRED?

The University of Helsinki (UH) is updating its research data infrastructure to provide:
- tools and services for supporting the management, use, discoverability and sharing of data
- capacity for storage, preservation, computing and processing

In order to meet these goals, UH launched a development project, MILDRED. The aim of MILDRED is to provide researchers with a state-of-the-art infrastructure and design data related services.

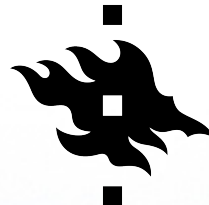

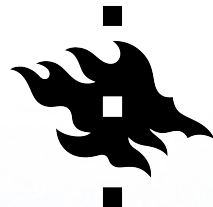

Five subprojects

MILDRED include 5 subprojects:
1. Digitalization of research data services delivery
2. Data repository service
3. Data publishing and metadata service
4. Data storage and backup
5. Implementation of data management planning tool – Tuuli

The subprojects will create services to all university disciplines. They will also take into consideration the needs of the big data users, as well as long tail data users. Both qualitative and quantitative research are taken into account in the projects.
