# NLP Services

## Other datasets and services

## Henko - person name ontology

 Based on Finnish Digital Agency's name data and person names collected from other Sampos.

## Gender identifier

 Tool for making a sophisticated guess about person's gener based on Henko's statistics of name usage

## Person name identifier

 Tool to aid in extraction of person names from text, enriching them with other contextual information

## Platform for NLP Services

## Publishing APIs for NLP processing

https://nlp.ldf.fi

SeCo Text Annotation Service is a set of different tools that can be used for Finnish text and language analysis. The tools exchange text to JSON that contains results of each tool.

### Select a tool of choice

#### **FINER**

lamed entity recognition based on the FIN-CLARIN's FINER tool.

### innish dependency parser

Linguistic analysis based on the Turku NLP Finnish-dep-parser

### Gender Identification Service

Application that can determine person's gender based on a name.

#### FinBER

TurkuNLP's named entity recognition application based on Google's BERT.

### Date and registry number identifiers

identifying registry numbers, dates, and more.

### APPI - Automatic annotation tool

Named entity linking based on voting scheme.

#### Person name finder service

Application that can pick up person names from text and offers links and contextual information (gender, lifespan) about each name.

## Next

- Service for transforming text to RDF
- Applying NLP methods and processes in LawSampo, ParliamentSampo
- Application for searching, classifying and exploring legal documents based on semantic content
- Other applications coming
